

CLINT EPPS

Associate Professor of Wildlife

ADVISOR

A part of my position as a faculty member here at Fisheries and Wildlife is advising. As an advisor I aim to prepare students as best I can.

I was born in Virginia and raised on a small cattle farm north of Charlottesville, which allowed me to spend plenty of time out rambling around in the woods, fields, and rivers of the piedmont. My interest in hunting in particular steered me towards my career in wildlife and conservation biology- why not make a living out of following animals around?

I studied biology at Rice University in Houston Texas, and got my Ph.D. at University of California (Berkeley) studying desert bighorn sheep.

Outside of work, I play in several local bluegrass/acoustic country bands, build and shoot traditional black powder long rifles, hunt deer, elk, birds, and small game, and get outside as much as possible with my wife and two daughters.

RESEARCHER

My research focuses on conservation genetics, animal movement and gene flow, and effects of climate change on wildlife. I study mammals around the western United States and parts of Africa and get out in the field every chance I get

TEACHER

I teach mammalogy, systematics of mammals, and mammal conservation and management.
