

Ecology, Evolution, and Conservation Biology Seminar Series

FW/FES 507

Winter Term

Wednesday 4 PM

Withycombe 109

SPONSORING DEPARTMENTS

Fisheries and Wildlife, Forest Ecosystems and Society, Integrative Biology, Botany and Plant Pathology, OSU Research Office, and Forest Biodiversity Research Network

Free and open to the public!

January 8 // Selina Heppell

Oregon State University

The Future for Sea Turtles on a Warming Planet

January 15 // Andy Blaustein

Oregon State University

Complex Causes of Amphibian Population Declines: Lessons from Disease Ecology

January 22 // Joe Parker

California Institute of Technology

Convergent Evolution of a Social Symbiosis

January 29 // Suzanne Macdonald

York University

From conflict to coexistence: Human-wildlife interactions in Kenya and in our backyards

February 5 // Carri LeRoy

Evergreen State University

Primary succession and plant sex influence ecosystem function in streams of Mount St. Helens

Join via Zoom: <https://beav.es/ZB4>

Accommodations for disabilities may be made by contacting 541-737-4893 or amanda.polley@oregonstate.edu.

PROFESSORS

Taal Levi

Matt Betts

David Lytle

February 12 // Marc Mangel

UC Santa Cruz

Ecological Detection in the Arctic: Three Vignettes

February 19 // Michael Nachman

Museum of Vertebrate Zoology, UC Berkeley

The genomic basis of environmental adaptation in house mice

February 26 // Lisette Waits

University of Idaho

Title TBA

March 4 // Kristin Brzeski

Michigan Technological University

Red, Gray, and Isolated: new discoveries of two emblematic wolf populations- red wolves and Isle Royale wolves

March 11 // Nancy Turner

University of Victoria

Wild cultivation: Traditional Plant Management Systems of northwestern North America

**Oregon State
University**
